Core Banking Application

Quipu Core Banking belongs to the new generation of Quipu software applications collectively known as the Quipu Banking Suite.

Quipu Core Banking is a front-office tool that is deployed mainly at branch level to manage all retail banking operations, including loan and account administration. It supports multi-branch, multi-currency, multi-product and multi-lingual implementations. Based on Microsoft's .NET technology and built on a scalable, open architecture, Quipu Core Banking is fast, efficient, maintenance-friendly, flexible and customisable.

Quipu Core Banking:

- can be combined with all the functional modules needed to manage the operations of a financial institution's network

- can easily be adjusted to comply with the local regulations of any country

- provides a very high level of security

- is highly scalable

- has a highly intuitive user interface
